

8" RAISED CERAMIC CHANNEL MARKERS

These maintenance-free ceramic markers provide excellent daytime visibility and promote self-cleaning. Recommended wherever controlled traffic management is needed. Available in high visibility white or yellow, reflective or non-reflective.

CONSTRUCTION:

Heat fired vitreous ceramic body with a heat-fired opaque, glazed top surface having a mean thickness of not less than 0.007". The center of the marker is filled with epoxy, and the bottom is covered with #30 sand to promote bonding. Nominal diameter is 8" and nominal height of 2 3/4". Water absorption does not exceed 1.5 percent of the original dry weight when tested.

APPEARANCE:

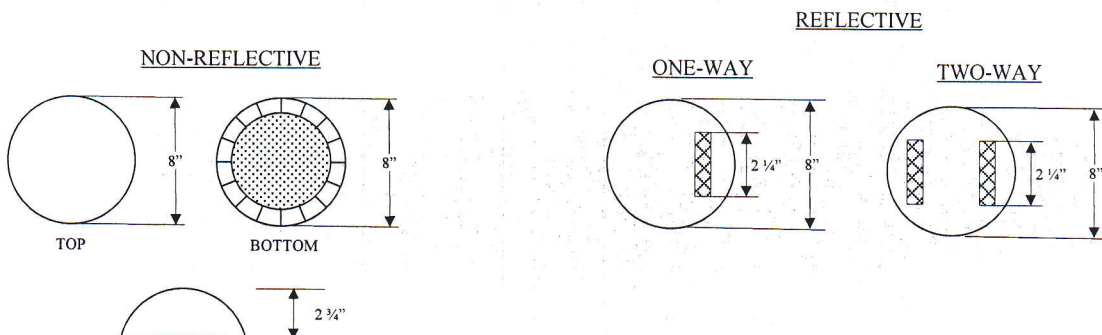

The channel marker shall be circular in shape, with a convex top surface.

COLORS:

The body is available in white or yellow. Colors comply to current state standards. Reflective lenses available in clear, amber and red (upon request).

GENERAL:

Markers are be used to direct traffic in a desire location. Markers are not to be used in place of standard lane markers or as speed bumps.

Drawing not to scale
